

ABSTRACT

- RESOURCE OPTIMIZATION SYSTEM

[It was fully made for the employees attrition system and for the resource optimization system]

ABSTRACT

RESOURCE OPTIMIZATION SYSTEM

ABOUT

In this project we create a resource optimization system with the help of machine learning attributes and some deep learning modules and we also use API keys for time manipulation and for mapping the origin and the destination address . we also plotted several graphs using matplotlib , seaborn and chart_studio to make a better solution for the company . by this system we can improve our company better by predicting the future of the company . since it is much more easier to find the difficulties that particular company . we (tech freaks) has also mentioned the distance between the place and also routed with powerbi .I'm damn surely saying that this project will definitely helpful in the big companies also.

MODULES WE USED

In this optimization system we have used many modules like ;

Matplotlib

Seaborn

Chart studio

Skilearn

Scikit

Keras

Time stamp

API key for mapping

Numpy's and pandas

We TECH FREAKS are damn sure that this project will obviously work

TEAM TECH FREAKS

This project is
completely done by

DHIVYA P

KANIKA

SUBRAMANIYAN

KAVIN V

AHANED THAIYUB A
